

NGA CENTER FOR BEST PRACTICES ABOVEGROUND STORAGE TANK REGULATION AND OIL SPILL PREVENTION CONFERENCE

MAY 8, 2000
THE WYNDHAM HARBOUR ISLAND HOTEL
TAMPA, FLORIDA

ATTENDANCE AT THIS MEETING IS LIMITED TO GOVERNMENT OFFICIALS ONLY.

ABOUT THE CONFERENCE

The key to minimizing the risk of transporting and storing oil and other hazardous materials is prevention—taking steps to keep the oil out of the environment is the best way to reduce damages when a spill does occur. States have developed many innovative ways to prevent spills, particularly in the area of aboveground storage tank (AST) regulation. This conference will provide an opportunity for state officials to share these innovations with their state and federal counterparts from across the country.

TOPICS TO BE COVERED

Some of the areas to be addressed during the workshop include:

- Current trends in AST regulation
- “Cradle to grave” fuels management initiative in EPA Region 9
- Preventing spills of non-petroleum oils
- Emerging tank inspection and secondary containment methods

WHO SHOULD ATTEND

State and federal officials responsible for the development and implementation of AST regulations and other spill prevention measures.

REGISTRATION FEES

Registration on or before April 3, 2000:

Full Registration \$60.00

Registration after April 3, 2000:

Full Registration \$75.00

Registration fees include continental breakfast, lunch, and breaks.
